

# STAMOID

## Care and Maintenance Guide

Completely waterproof, Stamoid is a vinyl coated woven polyester that can be used for exterior applications such as boat tops and protective covers. Easily cleanable, we recommend the following procedure for maintaining your Stamoid fabrics.

### PRE-RINSE

Spread out the fabric on a flat surface, pre-rinse the fabric with clear water. Moisten the fabric with a mild solution of gentle liquid soap and clean water or use a proper cleaning agent such as 303® Vinyl Cleaner.

### BRUSH WASH

Allow the cleaning solution to penetrate and gently brush the fabric to the edges using an ALL NATURAL SOFT BRISTLE brush. DO NOT use hard pressure during the brushing process as this may scratch or tear the vinyl.

### RINSE

Thoroughly rinse the entire fabric surface to remove any traces of the cleaning solution. In some cases of heavily soiled fabric, the cleaning procedure may need to be repeated followed by a thorough rinse.

### DRYING

The Stamoid® fabric should be hung up to completely dry.

### POST PROTECTANT

When the fabric is completely dry, an application of vinyl protectant such as 303® High Tech Fabric Guard™ should be added to the surface.
